Otis Historical Archives

OHA 293.05 Russell Collection

Date of Records: 1903-1962

Size: 1 Box and 1 Oversize Piece

Accession Number: 1999.0024

Finding Aid: Folder list by Joan Redding, 1/18/96; Rev. 1/30/96; Revised by Eric W. Boyle (2012)

Access and Use: The Otis Historical Archives is committed to providing open access to its collections as far as possible within the limits of privacy and confidentiality. Access to this collection is at the discretion of the Otis Historical Archives and material contained within the records may be subject to review before access is granted. Files containing private patient information and protected administrative and grant records are currently closed to researchers.

Biographical Note: Brigadier General Frederick Fuller Russell (1870, Auburn, New York, USA – December 29, 1960) was a U.S. Army physician who developed a typhoid vaccine in 1909. In 1911, a typhoid vaccination program was carried out to have the entire U.S. Army immunized. The 1911 measure eliminated typhoid as a significant cause of morbidity and mortality among U.S. military personnel. From a morbidity of 173 cases in 1910, Russell was able to reduce the total to nine cases in 1912 with only one death. During his career he served as curator of the Army Medical Museum, instructor in the Army Medical School, and professor of pathology and bacteriology at George Washington University. In addition, he served on various investigating boards, one of which he was able to advise and offer technical counsel to Major Carl Darnall in the development of a water filter for field use and the first water chlorinator using gaseous chlorine.

After his resignation from the Army in 1921, Russell returned to the rolls as a reserve officer and in November 1920 was appointed Brigadier General of the Medical Officers Reserve Corps. Following his military career he served as the director of the International Health Board of the Rockefeller Foundation. As director, Russell continued his research into public health focusing on diseases such as yellow fever. In 1935 he was awarded the Public Welfare Medal from the National Academy of Sciences. He spent the final years (1936–39) of his career in medical science and administration as professor of epidemiology and preventive medicine at Harvard Medical School and Harvard School of Public Health.

Series/Scope and Content Note: This collection includes articles written about Russell, articles by Russell, various articles written by contemporaries, memorabilia, awards, honors, presentations and obituary material. The materials are organized by type.

BOX AND CONTENT LIST

00001: Articles About Russell

- "Honorary Medical Society, George Washington University School of Medicine." *Medical Annals of the District of Columbia*, Volume II, Number 1, January 1933. (Whole issue)
