

Pathology

Pathology is the medical practice of using tissue to diagnose and study disease.

The Museum's collection of pathological gross tissue is one of the largest in the world and includes examples of conditions now rarely found because of modern medical advances and access to health care.

Cancer (Malignant Neoplasms)

- 1 Breast, Carcinoma
- 2 Leg of Chicken, Tumor, Injected with Rous Sarcoma Virus
- 3 Liver, Adenocarcinoma
- 4 Leather Bottle Stomach from Carcinoma
- 5 Tibia, Chondrosarcoma
- 6 Knee, Osteosarcoma
- 7 Carcinoma, Smoker's Lung
- 8 Kidney, Squamous Cell Carcinoma

Metabolic Disorders

- 9 Bilateral Nephrolithiasis (Kidney Stones)
- 10 Femur, Normal
- 11 Femur, Rickets

- 12 Kidney, Staghorn Calculus
- 13 Skullcap, Paget's Disease
- 14 Trichobezoar (Human Hairball from Stomach)
- 15 Laryngopharynx, Asphyxia, Steak Bolus
- 16 Congestive Heart Failure (Enlarged)
- 17 Spleen, Splenomegaly From Malaria

Infectious Disease

- 18 Foot, Small Pox
- 19 Foot, Small Pox
- 20 Foot, Hansen's Disease
- 21 Kidney, Glomerulonephritis (Scarlet Fever)
- 22 Scrotum, Elephantiasis
- 23 Brain, Tuberculoma
- 24 Lungs, Bronchopneumonia
- 25 Liver, Hydatid Cyst from Tape Worm
- 26 Liver, Atrophy, Hansen's Disease
- 27 Liver, Hemorrhagic Fever
- 28 Kidney, Hemorrhagic Fever

Congenital Anomalies

- 29 Megacolon
- 30 Horseshoe Kidney
- 31 Kidney, Duplicated Ureters
- 32 Fetus, Sirenomelia
- 33 Fetus, Spina Bifida and Meningomyelocele
- 34 Fetus, Anencephaly
- 35 Conjoined Twins, Thoracopagus
